

Whole House Fan

\$100

Member Rebate

Effective 1/1/22 through 12/31/22.

WHOLE HOUSE FANS

Cooling using a whole house fan can substitute for an air conditioner in some climates. Whole house fans combined with ceiling fans and other circulating fans provide acceptable summer comfort for many families.

How Whole House Fans Work

The whole house fan pulls air in from open windows and exhausts it through the attic and roof. It provides good attic ventilation in addition to whole house cooling. Whole house fans should provide houses with 3 to 6 air changes per hour (varies with climate, floor plan, etc.—check with a professional to determine what is appropriate for your home). The air-change rate you choose depends on your climate and how much you will depend on the whole house fan for cooling.

Installing and Using a Whole House Fan

Installing a whole house fan is tricky and should be done by a professional. An experienced professional should take your attic measurements and install your dedicated circuit wiring and, if needed, your new attic vents.

Attic ventilation will usually need to be increased to exhaust the fan's air outdoors. You'll need 2 to 4 times the normal area of attic vents, or about one square foot of net free area for every 750 cubic feet per minute of fan capacity. The net free area of a vent takes into account the resistance offered by its louvers and insect screens. More vent area is better for optimal whole house fan performance.

EMPOWER

All products are eligible for Empower financing. Let us help you bundle upgrades and meet all of your energy goals in one package. Invest in your home, in your comfort, and begin generating energy savings from day one.

- On bill financing
- Low interest rates
- Loans starting at \$500
- 2 to 20 year terms
- No money down
- Tax accommodations
- Up to 100% financing
- No fees
