Home Charging for Electric Vehicle Owners

Electric vehicle (EV) owners have multiple options for charging their vehicle at home. There are three common EV charging levels: Level One, Level Two and DC Fast Charge.

Level One Charging
Level One is the most basic charging level. If you choose this option, your EV will typically include an adapter that plugs into a typical 120-volt outlet. This is the easiest and cheapest charging solution, but it will take much longer to charge your EV.

Level Two Charging
Level Two is about three to five times faster than Level One, but this level of charging often requires separate purchases and installation. The EV is plugged into a 240-volt outlet, which is used for larger appliances, like a clothes dryer. Most homes do not include a 240-volt outlet in garages, so the outlet must be installed by a licensed professional. You typically see Level Two charging stations at shopping malls, office buildings and multi-family community spaces.

DC Fast Charging
DC Fast Charge stations are typically seen near high-traffic public areas, like gas stations, rather than in homes. This is the fastest charging level, with the ability to charge an EV at 80% in under 30 minutes. As EVs continue to become more popular, you can expect to see more DC Fast Charge stations throughout Colorado.

If you’re charging an EV at home, please contact SIEA. EV charging creates additional energy demand. The time of day you charge your EV can have an impact on the grid and your monthly energy costs. By letting us know about your EV charging levels, we can help ensure your home is prepared for the additional energy consumption.

Effective 1/1/22 through 12/31/22.

Most products are eligible for Empower financing. Let us help you bundle upgrades and meet all of your energy goals in one package. Invest in your home, in your comfort, and begin generating energy savings from day one.

- On bill financing
- Low interest rates
- Loans starting at $500
- 2 to 20 year terms
- No money down
- Tax accomodations
- Up to 100% financing
- No fees

EV charging installations require a dedicated circuit. Separate invoices providing a detailed list of EV charging equipment and electric service installation required with rebate application. EV charging installation rebates are subject to inspection and approval by San Isabel Electric Energy Services employees. Please submit all related receipts and paid invoices with this application to request an electric vehicle charger rebate.

REBATE REQUEST FORM

REQUEST REQUIREMENTS:

• San Isabel Electric MUST be your electric utility.
• A receipt or paid invoice for the product must be attached.
• All fields must be complete and accurate to qualify. For questions and more information, call 719-647-6250.
• The completed rebate request form and documentation must be received within 90 days of product purchase.
