

Insulation Upgrades Up To **\$500** Member Rebate

Effective 1/1/25 through 12/31/25

ENERGY-EFFICIENCY

Attention to your attic is often the area of your home where you can get the most bang for your buck on energy efficiency investments.

Step 1: Sealing

Attics are often the place where warm air leaks out of the home in winter or into the home during summer. It's best to properly seal trouble spots before adding or improving the insulation. Invest a small amount of money in the necessary supplies, such as caulk, expanding foam or weather stripping, to seal any air leaks in your attic.

Step 2: Ventilation

Many attics are under-ventilated, which allows moisture and heat to build up. Moisture causes harmful mold and wood rot. Proper attic ventilation lets air flow from a low point to a high point. This is usually done by installing soffit vents and insulation baffles around the perimeter, plus vents near the peak of the roof. An attic fan can be installed to provide mechanical assistance to exhausting overheated air.

Step 3: Insulation

The three main types of insulation for attics are loose-fill, batt and rigid. Whichever type you have, it needs to provide a high-enough level of insulation for your region, measured in R-value.

Batt and rigid insulation will often have the R-value printed on them. Loose-fill, which is blown in, is the most common for attic floors, and its R-value is approximately its depth in inches multiplied by 2.8. Your attic should have anywhere from 11 to 24 inches of loose-fill insulation. You can find the recommended level for your region at www.energy.gov.

If you have loose-fill insulation that is less than the recommended amount, you should be able to simply add more on top of it, as long as there aren't any moisture, rodent, ant or termite problems.

EMPOWER

Most products are eligible for Empower financing. Let us help you bundle upgrades and meet all of your energy goals in one package. Invest in your home, in your comfort, and begin generating energy savings from day one.

- On bill financing
- Low interest rates
- Loans starting at \$500
- Financing terms up to seven years
- No money down
- 0% interest for 12 months
- Up to 100% financing
- No fees

Visit siea.com/empowerfinancing for more information.

REBATE REQUEST FORM

Please allow an additional 30 days for paper form processing. To fill out this form online, visit sieweb.com/rebates. Having trouble locating required info or have other questions? Call 800-279-SIEA (7432)

Please mail completed forms and documentation to:
San Isabel Electric
Attn: Energy Services,
781 E. Industrial Blvd.
Pueblo West, CO 81007.

Insulation Upgrades Member Rebate

REQUIREMENTS:

- San Isabel Electric MUST be your electric utility.
- A receipt or paid invoice for the product must be attached.
- Rebates are limited and subject to funds availability
- All fields must be complete and accurate to qualify. For questions and more information call 800-279-SIEA (7432)
- The completed rebate request form and documentation must be received within 90 days of product purchase.

Effective 1/1/25 through 12/31/25

PERSONAL INFORMATION

AVAILABLE REBATES & PRODUCT SPECIFIC REQUIREMENTS:

- Blown-in insulation rebates are for retrofit installations only, not for new construction
- Spray foam insulation rebates are available for both new construction and retrofit installations.
- Before and after photos are required to be submitted with the application
 - Spray foam - 60% up to \$500
 - Blown-in - 60% up to \$250
